SLEEVE SEAL

The certainty that the product is intact.

SLEEVE SEAL.

Product intactness is an increasingly key issue, especially in the chemical sector, where the packaging often contains substances that must be handled carefully, but in geenral all sectors.
Providing immediate evidence of the perfect preservation of products, indicating that the packaging has been neither opened nor tampered with, means guaranteeing safety and reassuring consumers.

The Aro Group's sleeve seal provides safety and evidence: it is a neutral or printed heat-shrinkable film, which is applied to the cap of the product.
When the cap is unscrewed or removed, the sleeve seal breaks and shows right away that the product has been tampered with and, consequently, should be not consumed.
We have also designed a full-body version of the sleeve seal, ideal when the sleeve label must not only "protect", but also decorate the product.
