CURLING LABEL

Ecology and optimization.

CURLING LABEL.

Recycling glass bottles helps companies to have a sustainable behavior in terms of respect for the environment and of cost optimization.
The Aro Group, in order to support the choice of companies and make bottle recycling possible even when labels are made of plastic material, has designed the curling label.
It is a two-layer label that, when dipped in hot water, curls away from the bottle.
So, removing the label becomes a much easier task.

CURLING LABEL **[1]**
