SLEEVE WITH WATER-BASED INKS

Eco-sustainable and distinctiveness.

SLEEVE WITH WATER-BASED INKS.

Today, the respect for the environment and the adoption of "green" policies are a choice,which rewards companies also in terms of consumer satisfaction.
A green product conveys a concept of quality linked not only to the characteristics of the product itself, but also to the producer's choices.
To support the companies' environment-friendly philosophy, the Aro Group has produced sleeves with water-based inks, i.e. heat-shrinking films that are printed using water-based inks.
So, the product acquires a green image and the risk of toxicity is reduced.
