Convenience and visibility.

TAG LABEL.

In today's markets, making every procedure practical and simple through functional choices is a good way to optimize results and, often, also to cut costs.

For example, identifying your product through the same tool that can be used to display it.

This is the case of the Aro Group's slotted label, a product identification label with an area dedicated to variable data, which comes with a slot that allows the package to be hung to any support, such as displays in the point of sale.
