LABEL WITH INVISIBLE (WOOD LAMP) OR LUMINESCENT INKS

For use of inks used for safety information.

LABEL WITH INVISIBLE (WOOD LAMP) OR LUMINESCENT INKS.

Efficiency in the procedures of goods identification and management is a strength and a help to competitiveness for every company. Efficient identification of production lots and fast processes are highly beneficial.

The Aro Group supports companies in optimizing their processes with two highly effective products:
- labels with invisible inks allow products to be marked with security codes using invisible inks that can be detected with the Wood lamp. This optimizes procedures without using marks that could stain the products.
- labels with luminescent paints, which are treated with special paints that light up when hit by a beam of light. This way, the machine effectively detects the presence of the label before labeling, allowing a high labeling speed and avoiding that some units are not labeled.
