SLEEVE FOR SQUEEZABLE TUBES

Aesthetics and concreteness.

SLEEVE FOR SQUEEZABLE TUBES.

Being competitive is a strict rule in the cosmetics market.
Offering attractive products and containing production costs may be considered a successful strategy.
When it comes to squeezable tubes, in order to achieve top-notch aesthetic results without using screen printing, the Aro Group has developed a valid alternative, which is less demanding in terms of workmanship and cost.
Squeezable tube sleeves reproduce the visual characteristics of screen printing, using a suitable highly compressible material film to be heat-shrunk on squeezable tubes.
