

## TAMPER-EVIDENT LABEL

Security and functionality.

### TAMPER-EVIDENT LABEL.

Security in the cosmetic sector is important both as an attention to the consumer and to preserve the quality of products, especially high-end products.

To guarantee the security, it is important to exclude all types of tampering, clearly detecting whether full or partial tampering has occurred.

The Tamper Evident label of the Aro Group allows the immediate identification of whether the product has been tampered with: it is a small, transparent label that is applied to the opening side of the packaging. In case of attempted opening, the label breaks and ruins the packaging in which the product is contained, clearly showing the tampering.
