OK COMPOST LABEL: FULLY ECO-SUSTAINABLE

The label for compostable bags.

OK COMPOST LABEL: FULLY ECO-SUSTAINABLE.

Today, EN13432 standard for industrial composting requires very strict eco-sustainability characteristics. And the materials used for labels dedicated to printers and scales must fully comply with it.
The Ok Compost label guarantees full compostability, in line with EN 13432. This eco-sustainable label is the perfect match for compostable bags: together they make up the packaging of many products, particularly in the food area, and guarantee food protection, excellent visibility of information and convenient disposal.

Our labels, in fact, are made with fully compostable materials, so much so that they have obtained the Ok Compost product certification, according to EN13432 (European Compostability Packaging Standards). This type of label, releases nutrients (humus, compost) in the decomposition phase, and is suitable for direct contact with dry and non-fat foods.
The high performance guarantees food protection, excellent visibility of information and convenient disposal (in fact, our labels can easily be disposed of together with organic substances and the organic waste bag: an advantage for both the large-scale retail trade and users). A product that offers convenience and performance to a very demanding sector and that can be used with printers and labeling scales.
