SOLUTIONS SUITABLE FOR CONTACT WITH FOOD

A traceability tool.

SOLUTIONS SUITABLE FOR CONTACT WITH FOOD.

In the food sector, any contact among media, materials and food must be safe and comply with regulations. For example, in case of slaughtering and meat processing, solutions must not only allow identification and traceability of the slaughtered animal's carcass, but also spread this recognition to every stage of the working and preparation processes.

The Aro Group meets the needs of people who work in all or some of the stages of the production chain through labels suitable for contact with food, developed in coated paper with an adhesive specifically designed for direct application on the carcass.

The range of safe and versatile solutions also includes non-stick plastic tags: non-stick plastic transfer media with notches or slots that can be overprinted by thermal transfer, which are also suitable for contact with food.

All solutions proposed by the Aro Group comply with the regulations in force
