KEYBOARDS

Effectiveness and resistance.

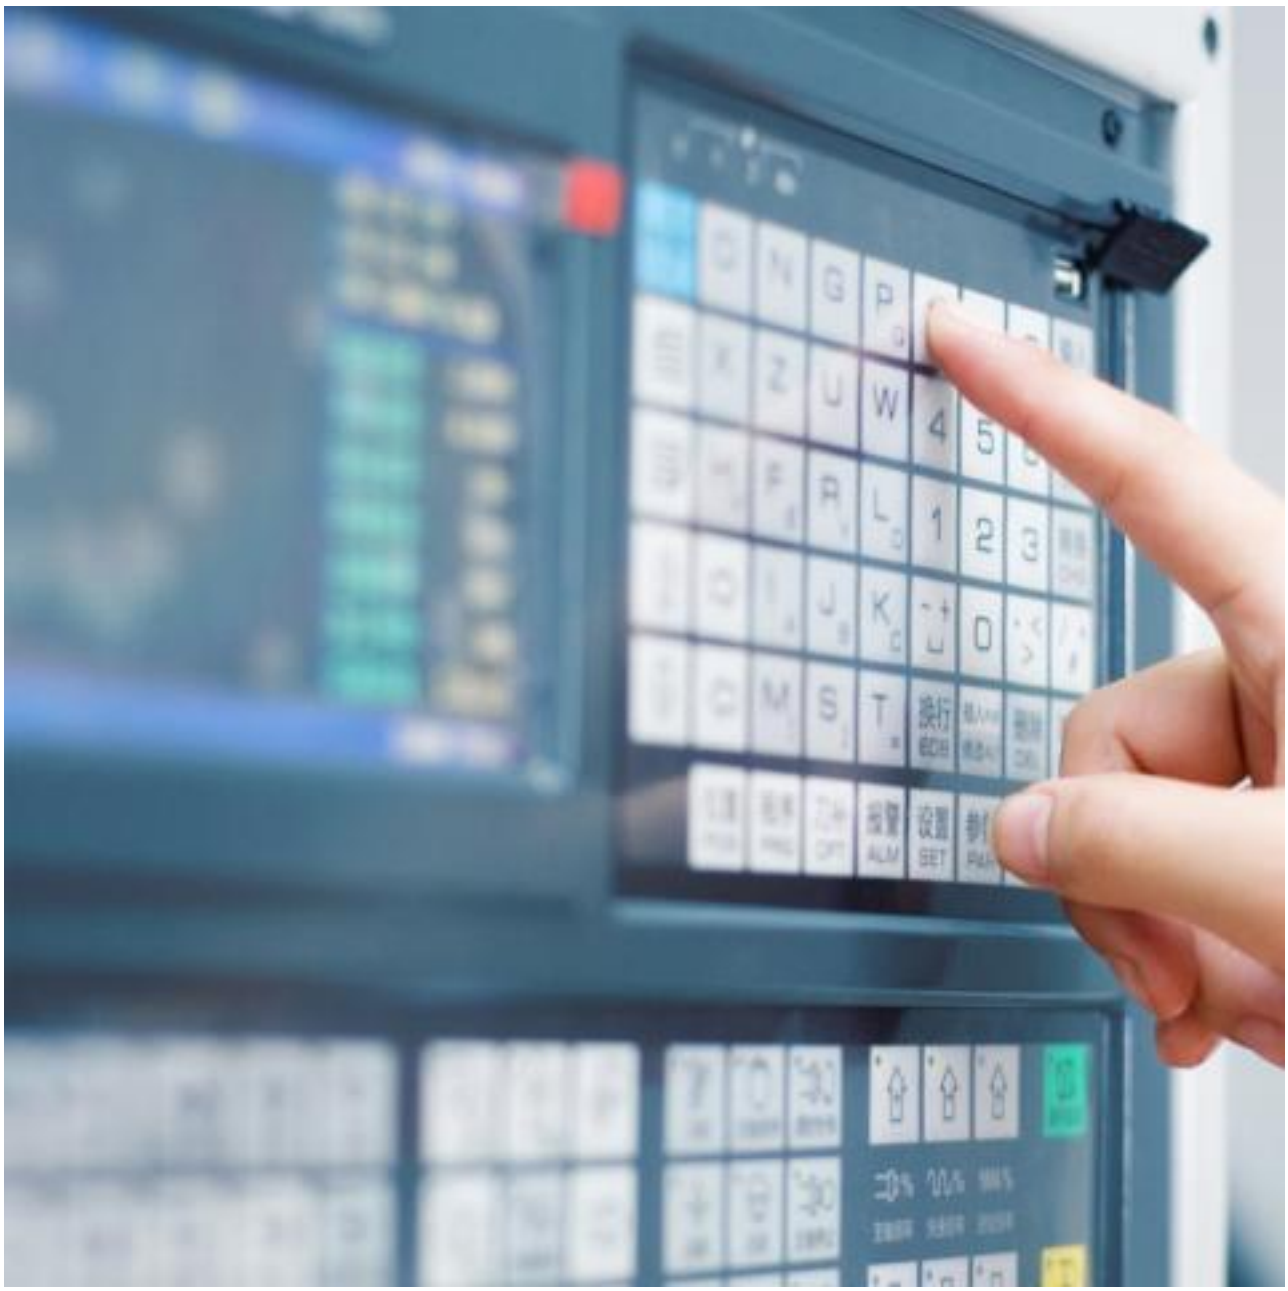

KEYBOARDS.

Using modern machinery is an increasingly complex task and the information and guidance role played by front panels and templates is precisely that of facilitating and making the management and control of machines more intuitive and faster.

The Aro Group meets this need with keyboards:
polycarbonate or polyester front panels and control masks can be produced in various special finishes (for example, glossy, matt or scratch-resistant), flat or drawn, with or without adhesive.
They stick perfectly to the surface and are produced to resist tampering attempts and wear and tear and to effectively protect the underlying circuits.
