LIGHT-RESISTANT LABEL

Strength and durability.

LIGHT-RESISTANT LABEL.

Labels not only identify products and machinery, but convey the most important information in a simple and clear way.
Under certain conditions, labels are subject to aging or weathering. An example is that of labels subject to the daily action of light, because they are attached to products or machines that are located outdoors.
Day after day, sunlight weathers the label and makes it less and less readable.

For this type of application, the Aro Group has designed light resistant labels, whose materials and colors are specifically produced to maintain the same quality even after a long exposure to light.
