OGIVE LABEL

Identification and duration.

OGIVE LABEL.

Labels inform, attract and describe. Some of them, however, as the result of the sector of use or the type of application, are more exposed to the risk of wear.
For example, labels that are applied to gas cylinders or similar products must stick to a medium that is often uneven and rough and must stand storage conditions involving shocks and rubbing.

For this type of condition, the Aro Group has designed the ogive labels, made of vinyl material and mainly dedicated to use on gas cylinders.
These labels are used to identify the contents of the cylinder and are produced specifically for application on round and rough surfaces.
