

## DOUBLE LABEL

Reliability and monitoring..

### DOUBLE LABEL.

A fundamental requirement of all medical facilities is making the control on the administration of medicines to patients simple and fully reliable at the same time.

The certainty of compliance with the administration doses and methods, as well as of the lot to which the medicine belongs, is a key condition.

To make this process simple and reliable, the Aro Group produces its double labels: labels on coupled material with a double perforation, which creates a main label and a secondary label, both with the same data.

The first is applied to the vials and the second, once the medicine has been administered, is stripped away from the vial and attached to the patient's medical record. A simple operation that provides a secure result.
