TWO-LAYER LABEL WITH REMOVABLE EAN BARCODE

Convenience and method.

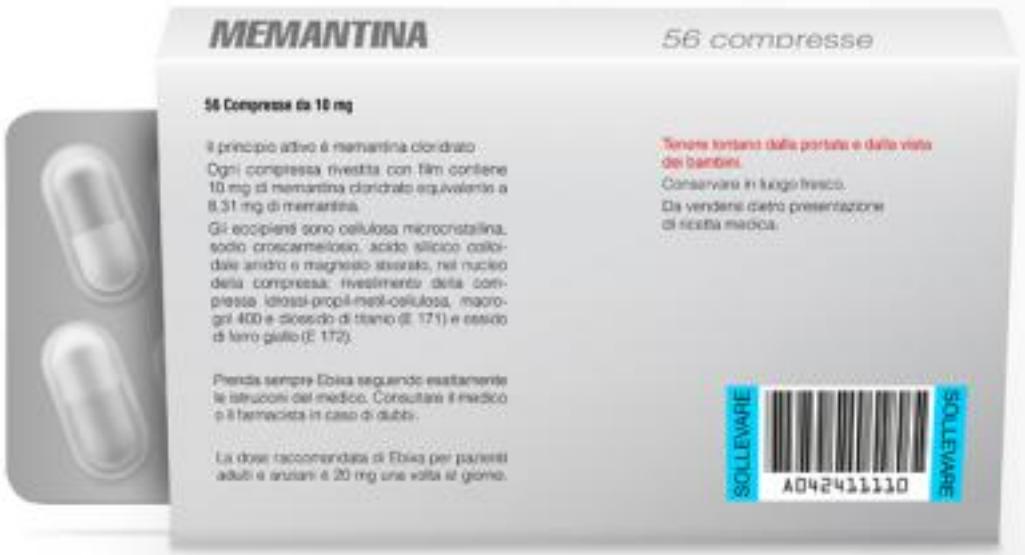

TWO-LAYER LABEL WITH REMOVABLE EAN BARCODE.

In managing the daily activities of a doctor, nurse or pharmacist, time and precision are often two conflicting factors. For example, handwriting a product's identifying information to maintain traceability or obtain reimbursement from the Local Health Companies takes time and can lead to transcription errors.

To speed up and make this practice more reliable, the Aro Group produces two-layer labels with removable EAN barcode: open and close labels consisting of two coupled materials, one clear and one white on which the product identification barcode is printed.
The white material is perforated, so it can be removed and applied where needed.
This fast and simple operation guarantees accuracy in copying data.
