LABEL WITH MICRO-TEXT

Anti-counterfeiting security.

LABEL WITH MICRO-TEXT.

Counterfeiting of pharmaceutical products is a risk from which pharmaceutical companies and medical facilities need to protect themselves.
So, it is very important to use systems that identify, through the label, if a medicine is or may be counterfeit.

To meet this need, the Aro Group has developed labels with micro-text.
These are labels on which security codes are printed with text so small it its almost invisible.
The absence of these codes makes it possible to identify a counterfeit product, which, then, cannot be marketed.
