

SECURITY LABEL

Maximum security against tampering.

SECURITY LABEL.

Two key requirements in the medical sector are the intactness of all parts of a pharmaceutical and the certainty that the traceability of a product cannot be exchanged with another one's by swapping labels.

In order to give full guarantee in this sense, the Aro Group proposes security labels, made of special ultra-destructible materials, which can be combined with a dedicated perforation.

Any attempt to remove the label would destroy it, making the counterfeiting (tampering) attempt patent.
