SOLUTIONS SUITABLE FOR CONTACT WITH FOOD

A traceability tool.

SOLUTIONS SUITABLE FOR CONTACT WITH FOOD.

In the food sector, any contact among media, materials and food must be safe and comply with regulations. For example, in case of slaughtering and meat processing, solutions must not only identify and trace the slaughtered animal's carcass, but also recognize it in each stage of the processing and preparation process.

The Aro Group meets the requirements of people who work in all or some of the stages of the production chain with labels suitable for contact with food, developed in adhesive coated paper that is specifically designed for direct application on the carcass.

The range of safe and versatile solutions also includes non-adhesive plastic tags: non-adhesive plastic transfer media with notches or slots and that may be overprinted by thermal transfer. Also these tags are suitable for food contact.

All solutions produced by the Aro Group comply with the regulations in force.
