SECURITY LABEL

Maximum security against tampering.

SECURITY LABEL.

Intactness is a key requirement in the industrial sector.
It is important to be certain that the traceability of a machine cannot be exchanged with another one's by swapping labels.

In order to give full guarantee in this sense, the Aro Group proposes security labels, made of special ultra-destructible materials, which can be combined with a dedicated perforation.
Any attempt to remove the label would destroy it, making the counterfeiting (tampering) attempt patent.

SECURITY LABEL **[1]**
